LAB5
Favorite Shopping Items App

Favorite Shopping Items App is a mobile application that helps users manage a personal collection of favorite shopping items they love or wish to buy. The app allows users to add, delete, and view items, as well as toggle their status between “Wishlist” and “Purchased”. All data must be stored locally using SQLite and the app must run on both Android and iOS using Flutter

Data Structure
Each shopping item includes the following attributes:

Field	Type	Description
id	Integer	Unique identifier (Auto Increment)
itemName	Text	Name of the item (e.g., Nike Air Force 1)
category	Text	Category (Fashion, Electronics, Home...)
price	Real	Price in VND
status	Text	Wishlist or Purchased

General Requirements:

- A **Resources** folder containing sample data is provided. The project must include images and provided assets.
- **Project folder name: lab5.**
- Development Tool: **Visual Studio Code**, **Flutter SDK**
- Data Storage: Use **SQLite**
- Use **Use BottomNavigationBar** to switch between screens.
- UI Enhancement: Apply Material Design with responsive layouts, icons, and appropriate styling.

Tasks to be Completed:

Task 1: Favorite Shopping Items List Screen (Home Screen)

Create the main screen displaying all favorite shopping items *(see **Figure 1**)*. This screen must include:

- Display items in a Display items using ListView.builder showing: Item Name, Category, Price, and Status
- Use Use BottomNavigationBar to switch between screens.
- On first launch, the list may be empty. Users can add new items using a button.
- Show a banner image at the top of the Home screen.
- Tapping an item navigates to its Detail screen.

Task 2: Add New Shopping Item Screen

Create a screen to add new items (*see **Figure 3***):

- Input fields: Item Name, Category, Price, and Status.
  Note: The id field is automatically generated, and the Status field defaults to "Wishlist".
- Save the new item to SQLite and immediately update the Home screen list
- Pressing the Cancel button should return to the Home screen.

Task 3: Item Detail Screen

Create a detail screen showing full item info *(see **Figure 4**)*:

- Display all fields.
- Include three buttons on the same row:

- Toggle Status: Switch between "Wishlist" ↔ "Purchased"
- Delete: Remove the item permanently
- Back: Return to Home screen

Task 4: Wishlist Summary Screen

Create a screen that displays **only items with status** = "**Wishlist**" and shows a summary *(see **Figure 5**)*:

- Display the wishlist items using ListView.builder (showing name, category, price).
- Calculate and display at the bottom: **Total estimated cost** of all wishlist items (sum of price where status = "Wishlist")

Task 5: Additional Requirements

- Validate input fields and provide immediate feedback for adding, deleting, and marking items as Purchased, including confirmation before deletion (*see **Figure 2***).
- UI/UX: Clean, modern interface with consistent colors, icons, and spacing.
